**We are improving the way industry works with our unrivaled data science and predictive analytics by powering analytics-driven decision making.**

**REAL WORLD IMPACT**

**\$3.3M**

Potential Value per Year

Uptake's products can create \$3.3M of potential savings per year for an average large wind farm.

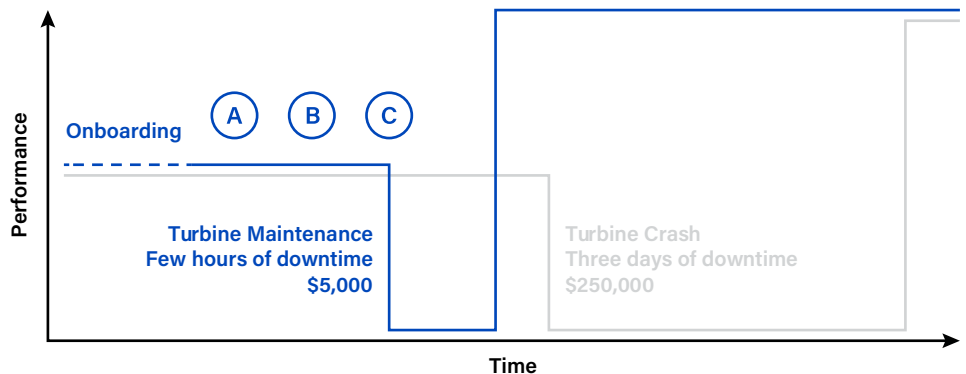

*The average large wind farm in Texas produces 326 MW (source: AWEA).*

**UPTAKE BRINGS WORLD-CLASS DATA SCIENCE TO BIG INDUSTRY**

A dedication to machine learning and data science puts Uptake at the forefront of predictive analytics. By using our platform to automate the asset monitoring process, employees are freed to focus on higher value activities. Our platform allows customers to plan ahead for their machines, driving cost savings and resource efficiency, and creating opportunities for large industry players to innovate and adapt to new tech trends.

**BUILDING THE FUTURE OF WIND WITH BHE SUBSIDIARIES:**

Uptake announced its partnership with Berkshire Hathaway Energy's subsidiaries to deploy our predictive analytics platform and products for the wind industry.

**A**  
Uptake configured a machine learning anomaly detection model to find issues on the low speed side of the drive train.

**B**  
Uptake identified assets that were showing signatures of gearbox main bearing failure including Tower 17.

**C**  
A technician was sent to the tower and discovered the whole main bearing had shifted. The Tower was shut down for resolution.
